

REPORT FOR FINAL SUBMISSION

I have accomplished the following tasks for the final submission:

1. In this submission, I have extended more features to the previous submission.
2. I added two more features that are the moon and the moon and earth together.
3. I have used all the points that I learnt in the previous weeks to develop a 3-D earth and moon.
4. Furthermore I combined the two of them together in one space to give a more realistic feel.
5. I have created a 3-D Earth and Moon which are partially interactive. The earth rotates on its own axis as well as it can be rotated by the user with help of the cursor.
