

REPORT FOR WEEK 5

I accomplished the following tasks in the week 5:

1. As it is the final week, I have used all the points that I learnt in the previous weeks to develop a 3-D earth.
2. I have used different kinds of lights, cameras, textures, mapping and many more features of the three.js.
3. I have created a 3-D Earth which is partially interactive. The earth rotates on its own axis as well as it can be rotated by the user with help of the cursor.
4. Having said this, I am working on making the political map of the earth more interactive by giving more information about the countries of the world.
