

# MANUAL FOR WEEK 5

- Due to incompatibility with 'Google chrome', please open my project in 'Mozilla Firefox'. By opening in Firefox only, it will not give the error due to the CROS policy. It is a chrome error.
- There is a html file called 'week5.html'.
- On opening it, two buttons can be seen with labelled 'Physical Map' and 'Political Map'. Clicking on the button will open respective globe.
- By opening the physical map, physical map of the earth is seen on the globe. It is rotating on its own axis.
- Also, I have used directional light and ambient light to create an effect such that sunlight is only falling on half of the earth at one time.
- There is a layer of clouds above the earth to give it more feel.
- By opening the political map, political map of the Earth can be seen on the globe. All the countries of the world are clearly visible as the globe rotates on its own.
- Moreover, the cursor should be moved on the screen, from right/left or up/down or vice versa to view the objects from different angles.
- Please go back in browser to return to the main page.
